

VistA Office EHR Update

Contract Status

- Completed CCHIT related development, enhancements including: document scanning, lab integration, prescription finishing
- Final software quality assurance will be completed CCHIT components by March 23rd
- Processes and infrastructure established to simplify ongoing maintenance and software updating
- VOE now available on Linux/GT.M platform, providing zero cost operating system, database and application option (AMA's CPT Code License, single application purchase cost)

VistA Office EHR Update Release Plans

- WorldVistA will distribute software as open source on Linux and Windows platforms via free Sourceforge download
- A growing community is being established to collaboratively improve and assist in the adoption of VOE
- WorldVistA has submitted VistA Office for CCHIT certification, attestation phase nearly complete
- VOE will likely be first CCHIT certified open source solution

VistA Office EHR Update

Planned Operations

- First regular vendor/user training events successfully run; plans to continue training opportunities
- Qualification process will focus on “individuals” in response to experience with beta test and evaluator's report
- WorldVistA will partner with experienced vendors to accelerate successful adoption
- Focus for the future is on developing innovative, cooperative models for implementation and support
